Possibilities

Mission Control

ALL
NEW

There's no place like space, and Space Port takes you there. Once you complete your training, you'll be ready to blast off. But being an astronaut isn't just squeezing food out of a tube and floating around in zero gravity. There are rockets to build, satellites to repair, and space labs to launch. And watch out for meteors! Those dangerous flying objects make every flight an adventure!

To find out more about real astronaut training for and NASA space missions, visit NASA's website at: <http://shuttle.nasa.gov>

Hallie Comet

As the navigator on all space missions, it's Hallie's job to make sure that no one gets lost in space. She is also an ace space mechanic and has fixed hundreds of damaged satellites while floating in space.

MEET THE
ASTRONAUTS

Buzz Bailey

Buzz is the top space jockey in Space Port. He has flown more shuttle missions than any other astronaut. His favorite place in space is the moon, and Buzz loves to zoom over moon dunes in his lunar rover.

6454 Countdown Corner

Three...two...one...blast off! Lights flash and the engine roars! As the arms of the launch pad drop away, you rocket off into adventure. Take a walk in space, then...warn Mission Control that a meteor is heading toward Earth!

Three real rocket sounds and light patterns.

Hatch opens for easy astronaut entry.

Use the rocket for an unmanned mission to release a satellite into orbit.

TRY A
NIGHT-TIME LAUNCH
FOR A REALLY COOL
LIGHT AND SOUND
SHOW!

Send rocket into space from launch pad.

We have adventure!

6453 Com Link Cruiser

With its rotating radar, this cool cruiser can detect incoming meteors. And when nobody's looking, you can pick up any sporting event in the world!

Chris Com Link

6463 Lunar Rover

6455 Space Simulation Station

If you can get through astronaut training, you're ready for anything in space. Take a spin on the G-force sling to see how your body holds up to the forces of gravity. Then, if you're not too dizzy, wobble over to the flight simulator. Hop in and take off on a virtually real space flight.

**ALL
NEW**

6456 Mission Control

Mission Control zooms into action to repair a damaged satellite. Fuel the shuttle and roll it to the launch pad. Engines rumble and flash, and the shuttle blasts off. Once safely in orbit, release the Canadian arm to hold the satellite in place for repairs. Mission Control gives you clearance to head home. Another mission completed!

...SPECIAL FEATURES...SPECIAL FEATURES...SPECIAL FEATURES...

Shuttle transforms into mini shuttle for return flight.

Hatch opens for quick satellite release.

Find a surprise inside the mystery meteor.

Cool Radio Tower to scan for incoming meteors and warn shuttle.

Press buttons to hear three different sounds and flash lights for blast off!

OKAY, WHO USED THE WALKIE-TALKIE TO CALL MARS?

Crawler moves shuttle to its pad.

HOW LONG DO I HAVE TO DRIVE THIS ROCK AROUND?

MISSION CONTROL WE ARE READY FOR TAKE OFF.

PRO GRAMMING GRABBER ARM

Be a Master Coder!
"My Commands" are useful for the Grabber Arm. Its program (shown here) uses them often.

Organize Your RCX Code

"My Commands" replace a long stack of commands with a single block.

COOL INVENTIONS GRABBER ARM

The Grabber Arm can reach and grab just like a human hand—and it looks like one too! This is no accident—this design is based on how a real hand works. Check it out below and on www.legomindstorms.com.

arm.

The LEGO model was brought on-board by Astronaut Daniel T. Barry to help launch the FIRST LEGO League. The FIRST LEGO League is a friendly, high-tech sporting event in which teams

top secret info - club members only

In the last issue, we took a look at all the tracks, characters and power-ups in LEGO Racers.

This month we'll examine the "Top Secret" driver and car building modes, where you can design and build your own custom LEGO driver and racing vehicle.

Check out these other cool features.

- Swap driver and car designs with friends by exchanging memory cards and controller paks. (Nintendo® 64 and PlayStation® versions only)
- Feel every bump and vibration on the road with force feedback. Force feedback support requires: Nintendo® 64 (Rumble Pak), PlayStation® game console (Dual Shock™ analog controller), or PC CD-ROM (DirectX-compatible force feedback)
- Race against a friend on the same computer or game console in two-player racing mode.

NEW

Snap together your own custom LEGO Racer champion on the "Build Driver" screen...

...then create a wacky driver's license, with a unique name and photo!

Using the "Build Car" screen you can use a ready-made car, or build one from scratch, brick by brick.

How you build your car will affect how it handles — take a spin on the test track to see how your new car drives.

LEGO creator

Have you tried out the secret night-vision mode?

Follow these steps:

1. Create a new LEGO World.
2. Place a single 6-stud LEGO Brick in the center of your world.
3. Place a video camera from the action bricks menu on top of the brick.
4. Enter Play Mode, then click on the night-time option on the menu.
5. Enter the camera's viewpoint and wait for it to get dark.

Experiment with the video camera and your environment settings to see your LEGO Creator worlds in a new light.

ZEPPELIN ADVENTURE

NEW

When we last saw Johnny Thunder, he was hanging around the jungle. There, Johnny found a magic sun disc but had to leave it behind. Now, the Adventurers are back. They must find the sun disc before Rudo Villano does. To avoid creepy spiders and snakes, they take off in their awesome Air Zeppelin

Meanwhile, down in the jungle, Rudo Villano is on the trail of the sun disc. He cuts his way through the cobwebs to a secret spidery surprise. Above the trees, the airship floats over a mysterious X-shaped clearing. **"That's it,"** exclaims Dr. Lightning. **"X marks the spot. Drop anchor!"** Johnny scrambles down the anchor chain. He runs into the clearing, but he is too late! Rudo has the sun disc and heads into the jungle.

While Johnny and Harry Kane build a speedy jungle cruiser from pieces of the airship, Dr. Lightning hurries after Rudo. He follows Rudo's path and then stops. The sun disc rests on the ground in front of him. **"Hmm. This smells like a trap,"** says Dr. Lightning.

"It is' said the spider to the fly," laughs Rudo Villano. He drives a creepy looking crawling machine straight at Dr. Lightning! Just as the big bug is about to put the squeeze on Dr. Lightning, Johnny's jungle cruiser flies in. Rudo and his bug buggy creep off into the jungle. Dr. Lightning goes to recover the sun disc, but it has disappeared! Only you decide who will find the sun disc!

You can build Johnny's jungle cruiser and Rudo's creepy crawler using the same pieces from the #5956 Air Zeppelin.

Go to www.LEGO.com/topsecret for tips on building Rudo's Creepy Crawler.

JUNGLE

CREEPY CRAWLER

DISCOVER THE SECRET OF THE

An evil emperor invades the land of the ninja. He robs from the rich. He robs from the poor. He even robs from the Shogun. This evil emperor keeps the treasure hidden in a super stronghold. Dangerous traps, secret entrances, and a booming cannon protect the castle. No one has tried to stop him -until now.

From a secret fire fortress, the mysterious Ninja Princess leads a brave band of red ninjas against the emperor. Trained by the wise Ninja Master, the red ninjas are the sneakiest ninjas around. The Ninja Princess plans to invade the emperor's castle and return the treasure to her people.

Revolving wall

#3052 Ninja's Fire Fortress

#3050 Shanghai Surprise

As the emperor sneaks a boatload of treasure into his castle, the even sneakier Ninja Princess glides above the castle and waves her sword. At the signal, red ninjas slide into the stronghold. The quest for the treasure begins. Who will keep the treasure? Only you can decide.

The mysterious Ninja Princess has left you a secret message about the Ninja's Flying Fortress. Rearrange the words to decode her message.

POLICE

Have you
ever looked
up at the
moon and
wondered
what it
would be
like to go there?

► Liftoff of the Apollo 11 Saturn V space vehicle at 9:32 July 16, 1969, soaring Astronauts Neil Armstrong, Michael Collins and Buzz Aldrin all the way to the moon.

But there was a spirit among the men and women of Apollo, that nothing is impossible if you work hard enough to achieve it. For almost a decade, the Apollo team — 400,000 people at NASA, aerospace companies, and

colleges — designed, built and tested the spacecraft and rockets for the lunar voyage.

The moment of truth came 30 years ago this month, on July 20, 1969, as Neil Armstrong and Buzz Aldrin transferred into the lunar module *Eagle*. On the way down,

Armstrong and Aldrin explored the moon's surface and experienced the delights of moonwalking. In lunar gravity, only one-sixth as strong as Earth, it was almost like walking on a trampoline. Armstrong and Aldrin could not help but be awed by the beauty of the lunar landscape. With no atmosphere, the sky was not blue, as it is on Earth, but black, like space itself. Armstrong and Aldrin picked up rock and soil samples, planted the American flag, and deployed a pair of scientific experiments that would relay data back to Earth.

After Apollo 11, NASA made six more attempts to land on the moon. All but one — the famous voyage of Apollo 13 — were successful, and each mission accomplished more than the one before it. And then, in December 1972, when Apollo 17 returned to Earth, Project Apollo came to an end.

One Giant Leap

by Andrew Chaikin, author of "A Man on the Moon" Now available in a fully-illustrated three volume set from TimeLife®

► Neil Armstrong, Commander; Michael Collins, Command Module Pilot; and Buzz Aldrin, Lunar Module Pilot.

For thousands of years, people dreamed about that. Movie makers created film versions of a lunar voyage (lunar means "moon"). Then, in the summer of 1969, the dream came true, thanks to Project Apollo — the U.S. effort to put astronauts on the surface of the moon.

In 1961, President John Kennedy challenged the nation to achieve a piloted lunar landing before the end of the 1960s. In 1961, the U.S. had made only one piloted space flight. No American had yet orbited the Earth. To reach the moon in eight years' time seemed impossible.

Photo: Courtesy of NASA

to the moon's surface. Armstrong and Aldrin battled computer alarms that threatened to stop the mission. With help from experts in mission control, they kept going. In the final minutes of the descent, Armstrong had to take control in order to avoid a crater the size of a football field. Finally, with the fuel supply running low, Armstrong brought *Eagle* to rest on the ancient plains of the moon's Sea of Tranquility. "Houston, Tranquility Base here," Armstrong announced. "The *Eagle* has landed. They had done it — they had actually landed on the moon!

Soon, Armstrong climbed down *Eagle*'s ladder. He raised his left foot and placed it on the powdery ground — the first human footstep on another world. "That's one small step for [a] man," Armstrong said, "one giant leap for mankind." An estimated 600 million people witnessed the event as it happened, thanks to live radio and television transmissions from the surface.

#6463 Lunar Rover

On the last three landings, the astronauts brought along a battery-powered car, the Lunar Rover. With it, they traveled miles across the surface, even onto the sides of lunar mountains, where they picked up rocks almost as old as the solar system itself.

Astronaut Aldrin stands beside the Lunar Module on part of his 22 hour stay on the moon's surface.

In the early 1980's, a handful of scientists began to think about going back to the moon. Engineer David Criswell designed solar power stations that could be set up on the the moon to provide energy to the earth. He estimated that the first lunar stations could produce 50 billion watts of energy a year.

However, going to the moon is still so expensive, that no one has yet made plans to go back.

Today, 30 years after Apollo 11's first lunar footsteps, no one can say when humans will return to the moon. Until they do, it is important to remember what the Apollo missions gave us. On those historic flights, humans made their first journeys from their home planet to another world. We learned many of the moon's secrets, including new knowledge about how

the solar system came to be. And when we looked back at Earth from all that distance, we saw a beautiful, precious world — a sight that has inspired us to take better care of the planet we call home. Finally, Apollo showed us that when we try hard enough, we can accomplish things that seem impossible.

for Mankind

#6454
Countdown
Corner

With a hot Earth in the background, the Lunar Module appears as a redoubtable and the Lunar Command Module.

Above: "Buck" Aldrin poses beside the American flag. The flag as well as the Astronaut's footprints are still on the moon today.

Right: Buck Aldrin performing one of the many tasks the Astronaut performed on the Moon.

CHAT WITH REAL ASTRONAUTS!

At www.headbone.com

Here's your chance to find out what it's like to step on the moon, fly a space shuttle, or walk in space! Through two live chats, you can meet four superstars of space, and ask them about their adventures in space.

You'll find some cool "factoids" about the astronauts below. To find out more visit www.LEGO.com/space.

JUST FOLLOW THESE 2 EASY STEPS:

1. Visit the Headbone Zone Sign Up HQ at <http://www.headbone.com/reg/> and click on "Sign Me Up!"
2. Be sure you're registered to chat on the Headbone Zone by Wednesday, July 28th, so we can process your registration in time for the chat. If you're under the age of 13, you'll need your parent's permission.

Friday, July 30th from 7:00-8:30pm (Eastern Time)
Chat with shuttle astronauts **Kathy Sullivan** and **Charlie Walker**.

KATHY SULLIVAN

- First woman to walk in space.
- Flew on first SpaceLab mission.
- Helped take Hubble Space Telescope to space.
- Studied Earth's atmosphere while on shuttle.

CHARLIE WALKER

- Shuttle crew member has flown more than 8 million miles in space.
- Trained other shuttle astronauts.
- Worked at Mission Control.
- Helped put Space Station in space.

Sunday, August 1st from 3:00-4:30pm (Eastern Time)
Chat with two friends and astronauts who walked on the moon, Apollo 12 astronauts, **Alan Bean** and **Pete Conrad**.

ALAN BEAN

- Astronaut/artist has drawn 200 paintings of important moments in space.
- Fourth person to walk on the moon.
- Commanded Skylab II mission: a 59-day, 24 million mile, world record setting flight.

During lift-off, their spacecraft was struck by lightning! They made it to the moon, and performed the first precision lunar landing in November 1969.

PETE CONRAD

- Third person to walk on the moon.
- This space cowboy brought country western music to the moon.
- First words after he stepped onto the moon: "Whoopie! It may be one small step for Neil (Armstrong), but it's one long step for me."
- Won Congressional Space Medal of Honor for rescuing the Skylab space station in 1973.
